

Lino

Technical features

colour	: 1301 - 1324
production method	: tufted
pile material	: 80% linen, 20% polyamide
pile height	: 25 mm
pile weight / m2	: 4500 gram
total weight / m2	: 5100 gram
number of colours	: 24
maximum size without seams	: 450 cm width, length unlimited
cleaning	: professional cleaning recommended
design	: Ulf Moritz

Durability

The addition of polyamide to the Lino makes it stronger and more flexible.

Lino has been tested by TNO and is suitable for the private market.

This rug can be used with under-floor heating.

Colour

The linen is bleached before it is coloured, which makes the yarn more colourfast than unbleached yarn.

Linen can always have a slight colour difference when it's being dyed, due to the fact that linen is an organic, vegetable based material, although they will be within our margin. Especially the 1313 and 1314, which are light and delicate shades, are more sensitive than others.

Maintenance

- It is important to vacuum your rug at least once a week to prolong its durability. The most effective way to remove dirt and dust is with the furniture cleaning attachment provided with your vacuum cleaner. A vacuum cleaner with a standard nozzle tends to remove less dirt and dust.
- Never use a rotating vacuum brush on this quality; this will permanently damage your rug.
- Vacuuming a new rug will produce fluff, but this is temporary. This fluff does not affect the quality of your rug.
- The ideal air humidity for linen is around 50%. Please note that if the air humidity is below 50%, the material becomes dry and its natural elasticity will decrease.
- In order to prevent wool from drying out, we recommend misting your linen rug with water regularly.
- If rubber soles are frequently walked over a woollen rug, it will wear quicker, especially if rotating or shifting movements are consistently made in one place.
- In order to prevent heavy use on one particular location, we recommend turning your rug around once in a while.
